Electronic hook switch guide

For Plantronics wireless systems

Electronic Hook Switch Overview

The Plantronics family of wireless headsets are designed to work with a wide range of telephone systems. Plantronics has developed the Electronic Hook Switch (EHS) range to enable customers to answer and end calls away from their desks. This is especially important where the physical design of the telephone does not allow for the use of Plantronics traditional HL10 lifter which also performs this function. This document provides guidance on the current system compatibility for the Electronic Hook Switches. For telephones not listed on this guide refer to the 'Find My Headset' tool on Plantronics.com

Sound Innovation™ for missions to the moon. And for everyday life on this planet, too.

In 1969, a Plantronics headset carried the historic first words from the moon: "That's one small step for man..." From the man on the moon to the man on the street, Plantronics is an innovation leader dedicated to creating communication solutions for people who understand and appreciate the real freedom of space. From outer space to inner space, find your space.
